

The core team of MyOS consists of five executive team members and three advisors. The team is diverse in nature and nurture. All have proven experience in the field of alternative investment marketing, currency trading and emerging technologies such as blockchain. Additionally, the team will be supported by experienced advisors in the fields of digital marketing, blockchain and smart contract development, regulatory compliance and cyber security.

Founding team members of MyOS are not just deeply rooted in Forex, CFD and Fintech markets, their connections and long-term business relationships represent great resources for bringing the communities of like-minded trading and investing individuals together in crypto.

ABOUT

MyOS is a community based trading exchange platform that allows anyone to participate in the crypto economy. By uniquely distributing 100% of the transaction fees generated on its platform (equally amongst its users and wallet holders) it is eliminating the need to have several unsecured web accounts and giving you everything you need to trade effectively within a trustworthy and safe trading environment.

MYOS is a utility token that will be used on the platform to distribute fees and access various features and services, such as AI onboarding, time stamped invoicing etc. MYOS will also be distributed to platform users to incentivise community building and value creation through the reward system. MyOS can be held as a trading asset as we plan to list it on all major exchanges. The number of MYOS tokens will be limited. After initial issuing, no further series of MyOS tokens will follow.

PROBLEM

Trading cryptocurrencies can be overwhelming. There is too much fragmentation within the available technological solutions, making monitoring multiple exchange accounts and keeping investment portfolio up-to-date a strenuous and time-consuming job. Furthermore, the crypto markets tend to be under constant cyber security threats and saturated with all sorts of information of which only a small proportion is truly reliable and may result in profits. Such circumstances make crypto-trading unnecessarily complex and challenging.

SOLUTION

We are building a trust-based social platform, which aspires to address all major shortcomings within crypto-trading and deliver a simpler, more intuitive solution for investors and traders, regardless of their experience level.

With 100% fund security as a priority, MyOS features a series of 2 factor authentication protocols and enhancements to protect, we believe that all MY OS holders will have an enjoyable trading experience while benefiting greatly from the power of a thriving community. Say goodbye to nerve-racking trading experience. With millions of transactions happening every second, MYOS will be crucial, to securely and conveniently handle these transactions.
